DATE MAILED: 01/25/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/733,842

Applicant(s)

NAICK ET AL.

Examiner

Fred A. Casca

Art Unit

2687

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on November 15, 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,3-8,10-17 and 19-23 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,3-8,10-17 and 19-23 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is in response to applicant's amendment filed on November 15, 2005. Claims 1-23 are still pending in the present application. **This Action is made FINAL.**

Claim Rejections –35 U.S.C. 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 7-8, 14-17 and 23 are rejected under 35 U.S.C. 102(e) as being anticipated by Lindquist et al., U.S. Patent No. 6,687,362 B1.

Referring to claim 1, Lindquist discloses a method in a wireless communication device for updating telephone information stored in the communication device (Figs. 1-3, abstract, and col. 2 lines 1-40, "automatic address book update"), said method comprising

receiving an error code from a wireless communication system (Figs. 1-3 and col. 5, line 55 through col. 6, line 10, note that in steps 306-309, the system determines if there is a new or additional information about the caller/receiver, inherently by an error code, where "yes" indicates the presence of an error code), wherein the error code is received in response to the wireless communication device initiating a call to a designated telephone number utilizing the wireless communication system (Figure 3, and col.4, line 52 through col. 6 line 10, "step 301", "subscriber . . . originates or receives a telephone call", "user sends or receives phone

Art Unit: 2687

call”, “is this caller or receiver in the user’s address book”, “update user’s address book”, note that user initiates a call in step 301, the system checks to determine if the caller or receiver is in the address book in step 306, the result is expressed as an error code in steps 306-309 with “yes” or “no”. Hence it is inherent that the error code is received (in steps 306-309) in response to the wireless communication device initiating a call to a designated telephone number utilizing the wireless communication system (step 301)),

automatically determining if the error code indicates that the designated telephone number has changed to a new telephone number, wherein the error code contains information indicating the new telephone number (Figs. 1-3 and col. 5, line 55 through col. 6, line 10, note that figure 2 illustrates an address book which contains telephone number. Further note that in figure 3 in steps 306-309, the system determines if there is a new or additional information about the caller/receiver, hence it is inherent that the system automatically determines if the error code indicates that a designated telephone number has changed to a new telephone number, where the error code contains information indicating the new telephone number),

automatically determining the new telephone number from the information; and automatically updating **each instance of the designated telephone number within** a database contained within the wireless communication device with the new telephone number (Figs. 2-3, col. 4, lines 28-50, and col. 5, line 55 through col. 6, line 10, note that the address book is automatically updated in step 309, hence it is inherent that a new telephone number is determined automatically from the information provided by the error code. Further note that figure 2 shows each instance of the designated telephone numbers is included in the designated

database field, hence it is inherent that when a designated telephone number is updated, each instance of that designated telephone number is updated).

Referring to claim 7, Lindquist discloses the method according to claim 1, wherein automatically updating each instance of the designated telephone number within the database includes updating a phone book contained in the wireless communication device (Figs 1-3, and col. 3, line 19 through col. 4, line 50).

Referring to claim 8, Lindquist discloses a wireless communication device having automatic update of telephone information stored in the wireless communication device (Figs. 1-3, abstract, and col. 2 lines 1-40, “automatic address book update”) comprising

means for receiving an error code from a wireless communication system (Figs. 1-3 and col. 5, line 55 through col. 6, line 10, note that in step 306-309, the system determines if there is a new or additional information about the caller/receiver, inherently by an error code, where “yes” indicates the presence of an error code); **wherein the error code is received in response to the wireless communication device initiating a call to a designated telephone number utilizing the wireless communication system** (Figure 3, and col.4, line 52 through col. 6 line 10, “step 301”, “subscriber . . . originates or receives a telephone call”, “user sends or receives phone call”, “is this caller or receiver in the user’s address book”, “update user’s address book”, note that user initiates a call in step 301, the system checks to determine if the caller or receiver is in the address book in step 306, the result is expressed as an error code in steps 306-309 with “yes” or “no”. Hence it is inherent that the error code is received (in steps 306-309) in response

Art Unit: 2687

to the wireless communication device initiating a call to a designated telephone number utilizing the wireless communication system (step 301)),

means for automatically determining if the error code indicates that the designated telephone number has changed to a new telephone number, wherein the error code contains information indicating the new telephone number (Figs. 1-3 and col. 5, line 55 through col. 6, line 10, note that figure 2 illustrates an address book which contains telephone number. Further note that in figure 3 in steps 306-309, the system determines if there is a new or additional information about the caller/receiver, hence it is inherent that the system automatically determines if the error code indicates that a designated telephone number has changed to a new telephone number, where the error code contains information indicating the new telephone number),

means for automatically determining the new telephone number from the information, and means for automatically updating **each instance of the designated telephone number within** a database contained within the wireless communication device with the new telephone number (Figs. 2-3, col. 4, lines 28-50, and col. 5, line 55 through col. 6, line 10, note that the address book is automatically updated in step 309, hence it is inherent that a new telephone number is determined automatically from the information provided by the error code. Further note that figure 2 shows each instance of the designated telephone numbers is included in the designated database field, hence it is inherent that when a designated telephone number is updated, each instance of that designated telephone number is updated).

Referring to claim 14, Lindquist discloses the wireless communication device according to claim 8, wherein the means for automatically updating **each instance of the designated telephone number within the** database includes updating a phone book contained in the wireless communication device (Figs 1-3, and col. 3, line 19 through col. 4, line 50).

Referring to claim 15, Lindquist discloses the wireless communication device according to claim 8, wherein the wireless communication device is a cellular telephone (Fig. 3, and col. 3, lines 19-37).

Referring to claim 16, Lindquist discloses the wireless communication device according to claim 8, wherein the wireless communication device is a wireless personal digital assistant (Fig. 3, and col. 3, lines 19-37).

Referring to claim 17, Lindquist discloses an article of manufacture comprising a machine-readable medium including program logic embedded therein that causes control circuitry in a wireless communication device for updating telephone information stored in the wireless communication device (Figs. 1-3, abstract, and col. 2 lines 1-40, "automatic address book update", note that address and telephone number updating is performed automatically, hence there exists a machine-readable medium including program logic in order to perform the updating process in figure 3) to perform a method comprising receiving an error code from a wireless communication system (Figs. 1-3 and col. 5, line 55 through col. 6, line 10, note that in step 306-309, the system determines if there is a new or additional information about the

Art Unit: 2687

caller/receiver, inherently by an error code, where “yes” indicates the presence of an error code), wherein the error code is received in response to the wireless communication device initiating a call to a designated telephone number utilizing the wireless communication system (Figure 3, and col.4, line 52 through col. 6 line 10, “step 301”, “subscriber . . . originates or receives a telephone call”, “user sends or receives phone call”, “is this caller or receiver in the user’s address book”, “update user’s address book”, note that user initiates a call in step 301, the system checks to determine if the caller or receiver is in the address book in step 306, the result is expressed as an error code in steps 306-309 with “yes” or “no”. Hence it is inherent that the error code is received (in steps 306-309) in response to the wireless communication device initiating a call to a designated telephone number utilizing the wireless communication system (step 301)),

automatically determining if the error code indicates that the designated telephone number has changed to a new telephone number, wherein the error code contains information indicating the new telephone number (Figs. 1-3 and col. 5, line 55 through col. 6, line 10, note that figure 2 illustrates an address book which contains telephone number. Further note that in figure 3 in steps 306-309, the system determines if there is a new or additional information about the caller/receiver, hence it is inherent that the system automatically determines if the error code indicates that a designated telephone number has changed to a new telephone number, where the error code contains information indicating the new telephone number);

automatically determining the new telephone number from the information, and automatically updating each instance of the designated telephone number within a database contained within the wireless communication device with the new telephone number (Figs. 2-3,

Art Unit: 2687

col. 4, lines 28-50, and col. 5, line 55 through col. 6, line 10, note that the address book is automatically updated in step 309, hence it is inherent that a new telephone number is determined automatically from the information provided by the error code. Further note that figure 2 shows each instance of the designated telephone numbers is included in the designated database field, hence it is inherent that when a designated telephone number is updated, each instance of that designated telephone number is updated).

Referring to claim 23, Lindquist discloses the article of manufacture of claim 17, wherein automatically updating **each instance of the designated telephone number within the** database includes updating a phone book contained in the wireless communication device (Figs 1-3, and col. 3, line 19 through col. 4, line 50).

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 3, 10 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lindquist et al., U.S. Patent No. 6,687,362 B1, in view of U.S. Pub. No. 20040176062 A1, Hsieh.

Referring to claim 3, Lindquist discloses the method according to claim 1.

Lindquist does not specifically disclose **detecting tonal signals** within the error code transmitted by the wireless communication system.

Hsieh discloses a method for detecting tonal signals corresponding to a tone frequency (Abstract, and paragraphs 0002, 0008, “detecting a tone signal”).

It would have been obvious to one of the ordinary skill in the art at the time of the invention to modify the method of Lindquist by providing the step of automatically determining if the error code indicates that a designated telephone number has changed to a new telephone number to include detecting tonal signals, within the error code transmitted by the wireless communication system, as suggested by Hsieh, motivation being to detect the any changes in the address book and consequently updating the address book.

Referring to claim 10, Lindquist discloses the wireless communication device according to claim 8.

Lindquist does not specifically disclose detecting tonal signals within the error code transmitted by the wireless communication system.

Hsieh discloses a method for detecting tonal signals corresponding to a tone frequency (Abstract, and paragraphs 0002, 0008, “detecting a tone signal”).

It would have been obvious to one of the ordinary skill in the art at the time of the invention to modify the method of Lindquist by providing the step of automatically determining if the error code indicates that a designated telephone number has changed to a new telephone number to include detecting tonal signals, within the error code transmitted by the wireless

Art Unit: 2687

communication system, as suggested by Hsieh, motivation being to detect the any changes in the address book and consequently updating the address book.

Referring to claim 19, Lindquist discloses the article of manufacture of claim 17.

Lindquist does not disclose **detecting tonal signals** within the error code transmitted by the wireless communication system.

Hsieh discloses a method for detecting tonal signals corresponding to a tone frequency (Abstract, and paragraphs 0002, 0008, “detecting a tone signal”).

It would have been obvious to one of the ordinary skill in the art at the time of the invention to modify the article of manufacture of Lindquist by providing the step of automatically determining if the error code indicates that a designated telephone number has changed to a new telephone number to include detecting tonal signals, within the error code transmitted by the wireless communication system, as suggested by Hsieh, motivation being to detect the any changes in the address book and consequently updating the address book.

3. Claims 6, 13, and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lindquist et al., U.S. Patent No. 6,687,362 B1, in view of U.S. Pub. No. 20030179866 A1, Stillman et al.

Referring to claim 6, Lindquist discloses the method according to claim 1.

Lindquist does not specifically disclose performing voice recognition processing on an audio signal accompanying the error code.

Stillman discloses an address updating method where voice recognition is used to recognize a subscriber's voice including performing **voice recognition processing** on an audio signal accompanying the error code (paragraphs 0028).

It would have been obvious to one of the ordinary skill in the art at the time of invention to modify the method of Lindquist by providing a voice recognition feature, as suggested by Stillman, motivation being for the purpose of performing voice recognition processing on an audio signal accompanying the error code.

Referring to claim 13, Lindquist discloses the wireless communication device according to claim 8.

Lindquist does not disclose performing voice recognition processing on an audio signal accompanying the error code.

Stillman discloses performing voice recognition processing on an audio signal accompanying the error code (paragraphs 0028).

It would have been obvious to one of the ordinary skill in the art at the time of invention to modify the device of Lindquist by providing a voice recognition feature, as suggested by Stillman, motivation being for the purpose of performing voice recognition processing on an audio signal accompanying the error code.

Referring to claim 22, Lindquist discloses the article of manufacture of claim 17.

Lindquist does not specifically disclose performing **voice recognition processing** on an audio signal accompanying the error code.

Stillman discloses an address updating method that comprises performing **voice recognition processing** on an audio signal accompanying the error code (paragraphs 0028).

It would have been obvious to one of the ordinary skill in the art at the time of invention to modify the article of manufacture of Lindquist by providing a voice recognition feature, as suggested by Stillman, motivation being for the purpose of performing voice recognition processing on an audio signal accompanying the error code.

4. Claims 4-5, 11-12, and 20-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lindquist et al., U.S. Patent No. 6,687,362 B1, in view of well known prior art (MPEP 2144.03).

Referring to claim 4, the Lindquist discloses the method according to claim 1.

Lindquist does not specifically disclose the **detecting a software object** within the error code transmitted by the wireless communication system.

The examiner takes official notice of the fact that it is well known in the art to use detecting software objects in determining if an error code indicates designated information.

It would have been obvious to one of the ordinary skill in the art at the time of the invention to provide the method of Lindquist with a detecting software object, motivation being to detect new information including telephone numbers in the software or error code.

Referring to claim 5, Lindquist discloses the method according to claim 1.

Lindquist does not specifically disclose the step of automatically determining the new telephone number from the information includes **extracting the new telephone number** from a software object within the error code.

The examiner takes official notice of the fact that it is well known in the art to extract information from a software object.

It would have been obvious to one of the ordinary skill in the art at the time of the invention to modify the method of Lindquist to include extracting the new telephone number from a software object within the error code, motivation being for the purpose of obtaining the new telephone information in the updating process.

Referring to claim 11, Lindquist discloses the wireless communication device according to claim 8.

Lindquist does not specifically disclose means for automatically determining if the error code indicates that a designated telephone number has changed includes **detecting a software object** within the error code transmitted by the wireless communication system.

The examiner takes official notice of the fact that it is well known in the art to use detecting software objects in determining if an error code indicates designated information.

It would have been obvious to one of the ordinary skill in the art at the time of the invention to provide the device of Lindquist with a detecting software object, motivation being to detect new information including telephone numbers in the software or error code.

Referring to claim 12, Lindquist discloses the wireless communication device according to claim 8.

Lindquist does not disclose means for automatically determining the new telephone number from the information includes extracting the new telephone number from a software object within the error code.

The examiner takes official notice of the fact that it is well known in the art to extract information from a software object.

It would have been obvious to one of the ordinary skill in the art at the time of the invention to modify the device of Lindquist to include extracting the new telephone number from a software object within the error code, motivation being for the purpose of obtaining the new telephone information in the updating process.

Referring to claim 20, Lindquist discloses the article of manufacture of claim 17.

Lindquist does not disclose the step of automatically determining if the error code indicates that the designated telephone number has changed includes **detecting a software object** within the error code transmitted by the wireless communication system.

The examiner takes official notice of the fact that it is well known in the art to use detecting software objects in determining if an error code indicates designated information.

It would have been obvious to one of the ordinary skill in the art at the time of the invention to provide the article of manufacture of Lindquist with a detecting software object, motivation being to detect new information including telephone numbers in the software or error code.

Referring to claim 21, Lindquist discloses the article of manufacture of claim 17.

Lindquist does not disclose **extracting the new telephone number** from a software object within the error code.

The examiner takes official notice of the fact that it is well known in the art to extract information from a software object.

It would have been obvious to one of the ordinary skill in the art at the time of the invention to modify the device of Lindquist to include extracting the new telephone number from a software object within the error code, motivation being for the purpose of obtaining the new telephone information in the updating process.

Response to Arguments

Applicant's arguments with respect to claims 1-23 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

Art Unit: 2687

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fred A. Casca whose telephone number is (571) 272-7918. The examiner can normally be reached from 9 to 5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lester Kincaid, can be reached on (571) 272-7922. The fax number for the organization where this application or proceeding is assigned is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
